Big time and money savings... in the palm of your hand

Time is money when it comes to getting accurate information quickly for better decisions in your sow reproductive operation. PigCHAMP Mobile eliminates the need for writing down information in the barn and then re-entering that information into a computer program. Accurate information is entered once in the barn and easily available for analysis and reporting in the worlds most powerful production software. Complete sow history is kept on the handheld device for easy access to sow history and action items.

In independent trials, PigCHAMP Mobile decreased time for data entry between 15-30% resulting in cost savings averaging \$1.45/sow/year over operating cost.*

PigCHAMP Mobile system overview

- The PigCHAMP Mobile system lets you collect data electronically and transfer it easily into the PigCHAMP Reproductive program
- PigCHAMP Mobile will run on any device running Windows Mobile 6.0+
- Data validation happens in the barns and the ability to edit events at the time of entry helps avoid costly mistakes and ensures data accuracy
- Options to read standard RFID tags for enhanced speed and accuracy
- NEW to PigCHAMP Mobile: Scan a bar code on a sow card or ear tag to have all the information you need in the palm of your hand; scan a semen bottle to automatically enter information
- Accommodates data entry for 48 individual events including animal movements, mating, farrowing, health treatments and batch arrivals
- Security measures for each operator and language toggle options (English, French and Spanish)
- Provides performance reporting and individual sow histories
- Access daily action lists in the barn, including: Sows Due For Attention, Open Sow List, Sows Due to Farrow and warning lists for Sows not Weaned and Sows not Served

* Additional trial results available upon request

"The main advantage (of PigCHAMP Mobile) is less corrections, less duplication, and actual real-time data on the farm." Alastair Bratton, Pinnacle Swine, AB

"PigCHAMP Mobile has saved me many an hour sitting in front of a computer, converting paper entries to our database." John Corbett, Neufeld Farms, AB
